

FAST, ACCURATE, & AVAILABLE

As COVID-19 surges in our communities, it's vital to quickly establish whether individuals have the virus and are contagious.

Texas MedClinic's COVID-19 rapid antigen test is performed in-house and provides accurate results, fast. Using a traditional nasal swab, the results of the test are ready within 15 minutes.

It's the first rapid antigen test to receive FDA authorization and continues to be a vital resource in curbing the spread of the virus in our communities.

Individuals, households, and businesses can have immediate clarity and take swift action to prevent the spread of the virus.

Testing is available at all 19 clinics in San Antonio and surrounding areas, for those with or without symptoms. Our team is doing our best to continue to *treat you well.*

SELF-ISOLATION

If exhibiting symptoms or diagnosed with COVID-19, a person must SELF-ISOLATE.

You need to meet ALL three criteria listed to leave self-isolation:

1. AT LEAST TEN DAYS SINCE SYMPTOMS STARTED
2. 24 HOURS WITH NO FEVER (with no medications to reduce fever)
3. SYMPTOMS ARE IMPROVING

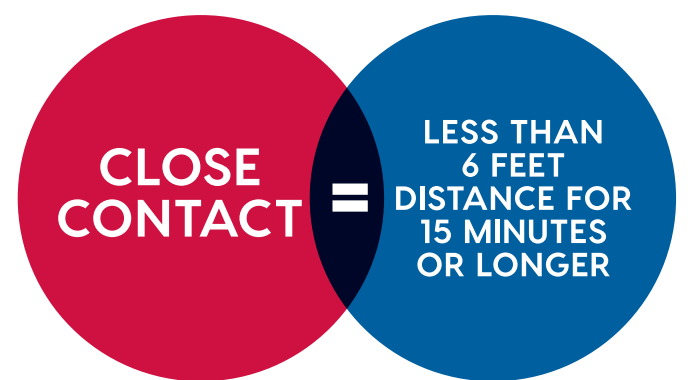

QUARANTINE

If asymptomatic and tested negative for COVID-19, but has been exposed, a person must QUARANTINE for 14 days.

Quarantine begins after the last day of your suspected exposure.

Understanding the definition of COVID-19 exposure helps reduce anxiety and fear when deciding how to care for your health and those around you.

The CDC defines COVID-19 exposure as having had close contact to a person who has tested positive for COVID-19.

NEW CDC GUIDELINE

Once you have met the criteria to leave self-isolation (above), the CDC states that those who have tested positive for COVID-19 do not need a test to return to work or to the community.
